The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. (I) makes possible production of large amount of recombinant immunogens. (I) makes possible production of large amount of recombinant immunogens. (I) makes possible production of III) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the constitution of the protein constitution of structure and the protein constitution of structure and the scherichia coll host. The present sequence represents the constitution of the protein constitution of the constitution of the protein constit exemplification of the present invention. 247pp; 3A-W; Fig ï Claim

that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis antifections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the M. catarrhalis strain 4223 immodaRMBLS clone 200kba gene, which is used in the exemplification of the present invention.

present invention describes an isolated and purified nucleic acid (I)

3; Fig 2A-W; 247pp; English.

Example

New nucleic acid encoding Moraxella catarrhalis outer membrane protein, useful in protective vaccines and for diagnosis

The DNA was isolated from a strain 4223 genomic library in phage lambda BMBL3 by screening with an anti-200 kDa protein guinea pig antiserum. The gene can be used for the recombinant expression of the OMP (for use in procedure), for the preps. of hybridisation probes, or may be

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moraxella catarhalis. The 200 kba outer membrane protein of Moraxella catarhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. [II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarhalis infections, particularly offitis media in humans. [II] is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/Cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coil host. The present sequence represents the M. catarhalis M56 200kba gene in pk8348, which is given in the

```
The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moravella catarrhalis. The 200 kDa outer membrane protein of Moravella catarrhalis. Can be used in vaccines. [II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly ottis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kDa protein genes from other strains, and for idagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents the M. catarrhalis strain 4223 genomic 200kDa coding sequence, which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                     New nucleic acid encoding Moraxella catarrhalis outer membrane protein, useful in protective vaccines and for diagnosis
                                                                                                                                                                                                             Klein MH;

that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein M. catarrhalis strain 4223 lambdaEmBh3 clone 200kba coding sequence, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes an isolated and purified nucleic acid (I)
                                                                                                                                                                                           6120

              The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAR789514 AAR28554). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   42555
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              42795
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     42615
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              42675

towards the Escherichia coli host. The present sequence represents the M. catarrhalls strain Q8 200kDa gene, which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                            that present invention describes an isolated and purified nucleic acid (I) that accodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as artigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kDa protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. (I) makes protein of large amount of recombinant immunogens.
                                                                                                                                                                                                                                                              nucleic acid encoding Moraxella catarrhalis
ul in protective vaccines and for diagnosis
                                                                                                                                                                              Klein MH

The present invention describes an isolated and purified nucleic acid (1) that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (11) has antibacterial activity and can be used in vaccines. [11], and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (11) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (1) are used for recombinant production of (11) and its fragments are used as probes for identifying/cloning 200 kba protein cannot be as probes for identifying/cloning 200 kba protein (1) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (11) reduces toxicity of the protein cowards the Escherichia coli host. The present sequence represents the M. catarrhalis less 200kba gene, which is given in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New nucleic acid encoding Moraxella catarrhalis outer membrane protein, useful in protective vaccines and for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Moraxella catarrhalis strain Q8; major outer membrane protein;

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kbs outer membrane protein of Moraxella catarrhalis.

The 200 kba outer membrane protein of Moraxella catarrhalis.

The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoasays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/Cloining 200 kba protein genes from other strains, and for identifying/Cloining 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis.

(I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents a moral strains and strains and sequence represents a moral sequence.
                                                                                                                                                                                                                          New nucleic acid encoding Moraxella catarrhalis outer membrane protein, useful in protective vaccines and for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 720 BP; 201 A; 142 C; 140 G; 237 T; 0 other;

New isolated polynucleotide useful for outer membrane vesicle preparation from Gram-negative bacterial strain for vaccination of useful for microbial infections -New isolated

Claim 46; Page 90; 128pp; English.

The invention relates to a genetically-engineered outer membrane vesicle
(bleb) preparation from a Gram-negative bacterium for use as a vaccine.
The blebs of the invention are improved with respect to their
contains the invention are improved with respect to their
contains the invention are improved with respect to their
changes to the chromosome of the bacterium from which the blebs are
derived. The changes made include the upregulation of protective antigen
expression, and genetic changes which result in detoxification of the
capression, and genetic changes which result in detoxification of the
chromopasses modified Gram-negative bacterial strains from which the bleb
preparations are made, a vector suitable for performing recombination
concepts of lippoplysaccharide (LPS). The invention is useful
concepts and non-toxic Gram-negative bleb, ghost, or killed whole
cell vaccine suitable for paediatric use. The bleb preparation is useful
immunoprotective and non-toxic Gram-negative bleb, ghost, or killed whole
call vaccine suitable for paediatric use. The bleb preparation is useful
concepts the manufacture of a medicament for immunishing human host against a
disease caused by infection of one or more of the following:
meningitidis, Neisseria gonorrhoeae, Haemophilus influenza, Moraxella
catarrhalis, Pseudomonas aeruquinosa, Chlamydia trachomatis, and Chlamydia
preumonia. The invention may also be used to provide immunisation against
the influenza virus. Bacterially derived nucleotide sequences of the
invention are used in the performance of homologous recombination events

for

il nucleic acid encoding Hemophilus influenzae adhesin protein, f as antigens and vaccines and for treating Hemophilus influenzae

Claim 1; Fig 21; 275pp; English.

up to 1000 bp upstream of a bacterial chromosomal gene in order to eithe increase or decrease expression of that gene. Immunoprotective and non-toxic Gram-negative bleb, ghost, or killed whole cell vaccines are more immunogenic, less toxic and safer, and are particularly useful for paediatric use. The present sequence represents a specifically

The present sequence represents a Haemophilus influenzae adhesin (Hia) gene from the non-typeable Haemophilus influenzae (NTH1) strain M407. Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. Hia is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  6229

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a Haemophilus influenzae adhesin (Hia) gene from the non-typeable Haemophilus influenzae (NTHi) strain 33.

Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carriter for other immunogens, and in the generation of diagnostic reagents. Hia is useful for treating diseases caused by the infection of Haemophilus
                                                                                                                                                                                                                                                                                   Hia; adhesin; Haemophilus influenzae adhesin; NTHi; infection; vaccine; non-typeable Haemophilus influenzae; antiinflammatory; auditory; antibacterial; meningitis; epiglottitis; septicaemia; otitis media; diagnosis; immunogenic; antigen; ds.
Novel nucleic acid encoding Hemophilus influenzae adhesin protein, fuse as antigens and vaccines and for treating Hemophilus influenzae infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   influenzae species. A truncated protein has a significantly higher
                                                                                                                                                                                                                                                       Haemophilus influenzae adhesin (Hia) gene from NTH1 strain 33.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 3036 BP; 965 A; 579 C; 799 G; 693 T; 0 other;

His genes and proteins have antilnflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An activities, and can be used in the production of a vaccine. An immunogenic composition comprising an His gene, a polypeptide encoded immunogenic composition comprising an His gene, a polypeptide encoded protection against disease caused by Heemophilus strains in a susceptible host, preferably a human. An His protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for corber immunogens, and in the generation of diagnostic reagents. His is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of His favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.

The present sequence represents a Haemophilus influenzae adhesin (Hia)

gene from the non-typeable Haemophilus influenzae (NTHI) strain K22.

His genes and proteins have antiinflammatory, auditory and antibocterial
activities, and can be used in the production of a vaccine. An
immunogenic composition comprising an Hia gene, a polypeptide encoded
by an Hia gene, or a recombinant Hia polypeptide is useful for Inducing
protection against disease caused by Haemophilus strains in a
susceptible host, preferably a human. An Hia protein is useful as an
antigen, in immunogens, and in the generation of diagnostic reagents. His
for other immunogens, and in the generation of diagnostic reagents. His
is useful for treating diseases caused by the infection of Haemophilus
influenzae such as mendingitis, epiglottitis, septicaemia and ottitis
media. Recombinant production of Hia favours high recovery of the
protein compared to the low recovery of native protein from Haemophilus
influenzae species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               6379

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                  ccatggatatgggcaggtgt......609ttgacctgcaggtcgac 6972

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (I), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoasays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kDa protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the mannification of the account of the protein contains strains, and appendic 200kDa protein, which is given in the exemplification of the present invention.                                                                                                                                                                                                        δy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes an isolated and purified nucleic acid (I). that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its catarrhalis. (I) makes possible production of large amount of recombinant immunogens. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents the M. catarrhalis strain 4223 lambdaBMBH3 clone 200kba protein, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                     NO:3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New nucleic acid encoding Moraxella catarrhalis outer membrane protein, useful in protective vaccines and for diagnosis
Moraxella catarrhalis strain 4223; major outer membrane protein;
200kDa outer membrane protein; antibacterial; immunogenic; infection;
otitis media; detection.
